INVESTMENT PHILOSOPHY

We believe that a company’s ability to generate consistent, long-term, above-average and sustainable earnings growth will drive enhanced stock price performance over time, due to both the higher level of future earnings and the higher valuation placed on these earnings by the market. Given the tendency of money managers to focus on short-term fundamentals and stock price performance, this sustainability of earnings growth is often overlooked and not properly recognized by the market.

FOCUSED RESEARCH

Bottom-up fundamental research is the key driver of our equity investment process and is the prime determinant of our success. Each of our equity analysts has a strong belief in our investment philosophy and they devote an extraordinary amount of time to developing original investment ideas and to gaining a deep understanding of each company's business.

Before purchasing any stock, we insist on speaking directly with company management. In most cases this is a personal visit. We want to hear management tell their company story to learn firsthand about their business strategies, current market conditions, competitive positioning, business outlook, and plans for sustaining future growth.

High quality management is one of the most important attributes we seek for the companies in which we invest. Proven experience, leadership talent, high integrity and possessing a strategic vision are some of the qualities we scrutinize. Especially among smaller companies, we find that appropriate leadership from the top has a greater direct impact on all aspects of a business: its growth profile, valuation, market positioning and financial strength. When it comes to assessing the quality of management teams, we believe we set the bar higher than other managers.
